

Camouflage sunscreens

Our camouflage sunscreens ensure the limitation of the effects of high temperatures inside our tents, regardless of the use of an air conditioner.

They also allow its camouflage and avoid detection by the naked eye, magnifying equipment (binoculars) or light intensification systems. The simple implementation of the sunshade reduces by 83% the power of solar radiations.

The complete sunshade kit for our tents incorporates a system that creates an air corridor of approximately 15 cm (minimum) height between the tent and the sunshade.

The volume created between the two surfaces is naturally ventilated and allows only 17% of solar transmission to the tent cover (1000 watts of sunlight = 170 watts on tent cover).

The sunshade is attached to the ground by a very simple set of straps and poles.

Technical and building maintenance support is carried out by our specialists worldwide.

NOTE : We reserve the right to make changes and alterations which optimise our products or to ensure they correspond to the latest technology and specifications.
